Boiler water level control refers to ensuring that the water level in the boiler is kept within a safe, stable and reasonable range through various control means and methods. Boiler water level control is essential to ensure the normal operation and safety of the boiler, because too low a water level will cause the boiler to overheat, which may lead to the risk of burning the boiler dry, while too high a water level may cause steam to carry water, reduce steam quality, and may even cause the boiler to explode.
