According to our (Global Info Research) latest study, the global Boiler Water Treatment market size was valued at USD 2901.1 million in 2023 and is forecast to a readjusted size of USD 4917.3 million by 2030 with a CAGR of 7.8% during review period.

Boiler water is raw water used in boilers for generating steam. It is a liquid phase of steam within the boiler. The term is also used for the treated boiler feedwater, or steam condensate being returned to a boiler, or boiler blowdown being removed from a boiler. Boiler water treatment is the protection of boiler water from corrosion and other impurities. The treatment and conditioning of boiler water is done for continuous heat exchange, corrosion protection, and production of high-quality steam. Boiler water treatment chemicals are added to the system for imparting efficiency, safety, and reliability to the system. The steam generation and heat transfer in any system can impact the fuel cost to maintenance expenses of the system. Chemicals in boiler water treatment are used for maintaining corrosion and deposition problems.

Factors like raw feed water treatment, reduction in pre-treatment and heat exchanger equipment cost, growing popularity of zer-liquid blowdown, strict boiler regulations and enhancing safety and efficiency of system are driving the market growth. Further, demand is increasing significantly in various end use industries favouring the market. However, hazardous nature of hydrazine is limiting the market growth. The oxygen scavenger segment is projected to be the largest market in chemical type because it protects the boiler and control corrosion of the feed tank. The Scaling inhibitors segment accounted for the second largest market share in the boiler water treatment chemicals type market as it reduces the damage caused by scaling. APAC will be the major revenue contributor to the market throughout the predicted period. This mainly attributes

to the increasing demand for electricity and the rise in focus of several countries in the region towards infrastructure development. Moreover, the expansion of existing refineries in the refining and petrochemicals industry will also drive the growth of the market in this region. Analysts predict that countries such as China, India, Australia, South Korea, Taiwan, Singapore, and Japan will account for the major market shares.
