According to our (Global Info Research) latest study, the global Boilers and Steam Generators market size was valued at USD 31640 million in 2023 and is forecast to a readjusted size of USD 35940 million by 2030 with a CAGR of 1.8% during review period.

A steam generator is a form of low water-content boiler, similar to a flash steam boiler. The usual construction is as a spiral coil of water-tube, arranged as a single, or monotube, coil. Circulation is once-through and pumped under pressure, as a forced-circulation boiler.[1] The narrow-tube construction, without any large-diameter drums or tanks, means that they are safe from the effects of explosion, even if worked at high pressures.
