Abstracts

A software bill of materials (software BOM) is a list of components in a piece of software. Software vendors often create products by assembling open source and commercial software components. The software BOM describes the components in a product. It is analogous to a list of ingredients on food packaging. The concept of a BOM is well-established in traditional manufacturing as part of supply chain management. A manufacturer uses a BOM to track the parts it uses to create a product. If defects are later found in a specific part, the BOM makes it easy to locate affected products.
Scope of the Report

This report studies the BOM Software market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the BOM Software market by product type and applications/end industries.
One trend propelling growth in this market is the incorporation of PLM software into enterprise and MES software. The integration of PLM software with enterprise and manufacturing execution systems (MES) software is an effective method that will boost the growth in the market. The integration enables better transparency across business units and helps to save time.
The recent increase in mass customization will be one of the major drivers for this market. The rise in demand for product customization has led to an increased use of BOM solutions across various industries. Initially, companies were dependent on mass production to reduce cost. However, mass customization is gaining popularity. Customization of the product can lead to the creation of a single BOM, which can be used once or multiple times.
North America accounted for about 38% of the total market share and dominated the
