According to our (Global Info Research) latest study, the global BOM Software market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A software bill of materials (software BOM) is a list of components in a piece of software. Software vendors often create products by assembling open source and commercial software components. The software BOM describes the components in a product. It is analogous to a list of ingredients on food packaging. The concept of a BOM is well-established in traditional manufacturing as part of supply chain management. A manufacturer uses a BOM to track the parts it uses to create a product. If defects are later found in a specific part, the BOM makes it easy to locate affected products.

One trend propelling growth in this market is the incorporation of PLM software into enterprise and MES software. The integration of PLM software with enterprise and manufacturing execution systems (MES) software is an effective method that will boost the growth in the market. The integration enables better transparency across business units and helps to save time.

The Global Info Research report includes an overview of the development of the BOM Software industry chain, the market status of Automotive (Engineering BOM, Manufacturing BOM), Aerospace and Defense (Engineering BOM, Manufacturing BOM), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of BOM Software.
