## Abstracts

Bonded Abrasives are a mixture of abrasive grains, fillers, and bonding materials. The bonding agents can be resin, rubber, glass, or other materials. As the wheel spins against the surface of a work piece, the grains fracture and wear away. As the top layer wears, a new layer of grains is exposed.

A Bonded Abrasive Wheel is a wheel composed of an abrasive compound and used for various grinding (abrasive cutting) and abrasive machining operations. Such wheels are used in grinding machines. The wheels are generally made from a composite material consisting of coarse-particle aggregate pressed and bonded together by a cementing matrix (called the bond in grinding wheel terminology) to form a solid, circular shape.
