## Abstracts

The global Bonded Broadband Service market size is expected to reach \$ 3973 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

To address the issues of high costs, low package compatibility, fragmented service management, and disjointed user experience when users use broadband and mobile services separately, bundled broadband services emerged. Since the widespread adoption of the internet and the accelerated trend of triple-play integration in the early 21st century, the telecommunications service sector has gradually broken down traditional business boundaries, and bundled broadband services have sprouted and developed against this backdrop. Currently, bundled broadband services have evolved into comprehensive communication solutions encompassing various types, including 'broadband + mobile voice/data packages,' 'family full-service bundles,' and 'enterprise dedicated lines + cloud service integration.' These solutions are widely used by home users, SMEs, educational institutions, and chain stores. Through package bundle discounts, unified billing management, seamless cross-device connectivity, and value-added service integration, they significantly improve user communication cost-effectiveness and service convenience, enhance user stickiness and service perception quality, and simultaneously promote the coordinated development and digital transformation of operators' businesses. They have become an indispensable 'one-stop' service model and user value management vehicle in the modern communication service market, meeting diverse user communication needs while achieving a win-win value creation for both operators and users.

As the 'highway' of the digital economy, bundled broadband services are currently undergoing a transformation from 'scale expansion' to 'quality upgrading.' Enterprises

must leverage technological innovation, ecosystem collaboration, and service optimization to seize opportunities arising from supportive policies, technological advancements, and evolving user demands. By doing so, they can achieve sustainable growth, underpin the high-quality development of the digital economy, and secure a strategic commanding height in the global landscape of technological competition and industrial upgrading.
