Abstracts

The global Bonded Slit Valve market size is expected to reach \$ 438 million by 2032, rising at a market growth of 6.7% CAGR during the forecast period (2026-2032).

Bonded Slit Valve (Door) is defined as a bonded slit valve door / bonded slit valve door plate, not the complete vacuum valve. It is a dynamic sealing door assembly used between load locks, transfer chambers, and process chambers in semiconductor tools. In this design, high-purity FFKM/FKM/PTFE-based sealing media are bonded or vulcanized directly onto an aluminum or stainless-steel door plate, replacing conventional O-ring groove designs to reduce abrasion, particles, and virtual leaks while extending PM cycles, yield, and uptime. Upstream sits high-purity elastomers, machined metal door plates, surface treatment, and bonding/vulcanization; midstream is door/seal manufacturing; downstream customers are primarily semiconductor equipment OEMs, with end demand coming from wafer fabs, display fabs, and some solar equipment.
