## Abstracts

According to our (Global Info Research) latest study, the global Bonded Slit Valve market size was valued at US\$ 280 million in 2025 and is forecast to a readjusted size of US\$ 438 million by 2032 with a CAGR of 6.7% during review period.

Bonded Slit Valve (Door) is defined as a bonded slit valve door / bonded slit valve door plate, not the complete vacuum valve. It is a dynamic sealing door assembly used between load locks, transfer chambers, and process chambers in semiconductor tools. In this design, high-purity FFKM/FKM/PTFE-based sealing media are bonded or vulcanized directly onto an aluminum or stainless-steel door plate, replacing conventional O-ring groove designs to reduce abrasion, particles, and virtual leaks while extending PM cycles, yield, and uptime. Upstream sits high-purity elastomers, machined metal door plates, surface treatment, and bonding/vulcanization; midstream is door/seal manufacturing; downstream customers are primarily semiconductor equipment OEMs, with end demand coming from wafer fabs, display fabs, and some solar equipment.
