According to our (Global Info Research) latest study, the global Bone and Mineral Diagnostic Testing market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Bone and mineral metabolism disorder is a collective term used to describe various conditions that make bones weak. Bone mineral metabolism maintains sufficient concentration of inorganic ions in blood serum. Progressive chronic kidney disease, especially end-stage renal disease (ESRD), is responsible for adverse changes in bone and mineral metabolism. Increase in serum parathyroid hormone levels due to fall in glomerular filtration rate is an indicator of bone disorder caused by chronic kidney disease. Reduction in kidney function leads to changes in bone mineral homeostasis and in levels of parathyroid hormone (PTH), 25-hydroxyvitamin D, 1,25-dihydroxyvitamin D, and fibroblast growth factor-23 (FGF-23). Disorders of mineral metabolism in chronic kidney disease (CKD) have been associated with higher mortality than anemia and inadequate dialysis.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high

costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
