Bone Regeneration Scaffold Material is an implantable biomaterial designed to provide a three-dimensional framework supporting cell attachment, proliferation, vascularization, and new bone formation. It is manufactured from natural biomaterials, synthetic polymers, ceramics, or composite materials with controlled biodegradability and biocompatibility. The material is mainly used in orthopedic repair, spinal fusion, craniofacial reconstruction, dental bone regeneration, and trauma treatment. The product scope includes implantable scaffold materials for bone regeneration while excluding artificial joints, metallic fixation devices, and injectable bone cement products.

The industry chain includes upstream suppliers of collagen, calcium phosphate, hydroxyapatite, bioactive glass, biodegradable polymers, and medical-grade processing materials. Midstream covers scaffold design, material synthesis, molding, surface modification, sterilization, packaging, and quality inspection. Downstream applications include orthopedic surgery, dental implantation, trauma repair, regenerative medicine,

hospitals, and research institutions.
