Abstracts

The global Bonnet Hair Dryers market size is expected to reach \$ 185 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

A bonnet hair dryer is a type of hair dryer that consists of a hood or bonnet attached to a stand or a chair, which is designed to enclose the head and evenly distribute heat. This type of dryer is commonly used in salons for deep conditioning treatments, perming, and drying hair in a more controlled manner compared to handheld dryers. In 2025, global Bonnet Hair Dryers production reached approximately 1,658 k units, with an average global market price of around 70 US\$/Unit. The production capacity of Bonnet Hair Dryers reaches 2,100 k units, and the industry's gross profit margin is approximately between 30% and 45%.

The market demand for bonnet hair dryers primarily stems from consumers' pursuit of convenience, hair care efficiency, and an enhanced at-home hair styling experience. Traditional handheld hair dryers require prolonged arm operation, easily causing fatigue, especially for those with long or thick hair or those with mobility issues. The hooded design frees up the hands, and the headband-style diffuser ensures even airflow, significantly improving drying comfort and safety. Meanwhile, its closed-loop hot air circulation helps reduce heat loss, and combined with negative ion or tourmaline technology, it can reduce high-temperature damage. Furthermore, manufacturers' continuous optimization of features such as quiet operation, quick drying, and foldability has further stimulated the purchasing interest of family users, especially female consumers, propelling hooded hair dryers from a niche product category into the mainstream market.
