According to our (Global Info Research) latest study, the global Book Embossing Machine market size was valued at US\$ 1458 million in 2025 and is forecast to a readjusted size of US\$ 1638 million by 2032 with a CAGR of 3.8% during review period.

In 2025, global book embossing machine production reached approximately 12,500 units. Book embossing machines are specialized equipment used for embossing processing on the surfaces of book covers, hardcover cases, notebooks, and packaging printed materials. These machines mainly use hot pressing, cold pressing, or foil stamping technologies to create text, patterns, logos, or texture effects on paper, leather, fabric, and synthetic materials. They are widely applied in publishing and printing, packaging and binding, cultural and creative products, and high-end gift manufacturing industries, helping improve product appearance, texture, and brand recognition. With the growing demand for hardcover books, premium packaging, and personalized customization, the book embossing machine market is gradually developing toward automation, high precision, and multifunctionality. The adoption of CNC control systems, intelligent temperature control, and servo drive technologies has further enhanced embossing quality and production efficiency. Meanwhile, the increasing use of environmentally friendly foil stamping materials and energy-saving equipment is also driving the industry toward greener manufacturing and sustainable development.

The book embossing machine market has shown steady growth in recent years, driven by increasing demand for premium publishing, hardcover books, and personalized packaging. As an important type of post-press and binding equipment, book embossing machines are widely used in publishing and printing, gift packaging, cultural and

creative products, and high-end notebook manufacturing. These machines can process text, logos, textures, and foil stamping effects, thereby enhancing product added value and visual appeal. With consumers placing greater emphasis on high-quality printed products and customized designs, publishing companies and packaging manufacturers are continuously increasing their demand for automated and high-precision embossing equipment. From the perspective of market demand, the expansion of hardcover books, premium gift boxes, and customized brand packaging has become a major driving force for industry growth. The growing demand for foil stamping, embossing, and creasing processes in educational publishing, art albums, commemorative books, and corporate customized gifts is promoting the development of multifunctional integrated embossing equipment. At the same time, the rise of short-run printing and print-on-demand publishing models has increased demand for small and medium-sized CNC embossing machines, encouraging equipment manufacturers to focus more on flexible production capabilities and rapid job changeover efficiency.
