The global Bookbinding Materials market size is expected to reach \$ 10080 million by 2029, rising at a market growth of 2.2% CAGR during the forecast period (2023-2029).

There has been a growing trend toward using sustainable and eco-friendly materials in bookbinding. This includes the use of recycled paper, responsibly sourced leather, and environmentally friendly adhesives.

Bookbinding materials refer to the substances and components used in the process of assembling the pages or leaves of a book, securing them together, and attaching them to a cover. These materials serve functional and aesthetic purposes, contributing to the durability, appearance, and overall quality of the finished book. Bookbinding materials can vary based on the binding method, the type of book, and the desired end result. Common bookbinding materials include paper, board, cloth or leather for covers, adhesive or glue, thread or cord for sewing, and various decorative elements. The selection of these materials depends on factors such as the intended use of the book, the desired level of craftsmanship, and the overall design aesthetic.
