According to our (Global Info Research) latest study, the global Boost Inductor market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

A boost inductor is an inductor used in a boost converter, designed to increase the input voltage to a higher output voltage by storing and releasing energy. During the charging phase of the inductor, the magnetic field of the inductor stores energy when current passes through the inductor; when the switch is turned off, the stored energy is released to the output to achieve a voltage boost.
