According to our (Global Info Research) latest study, the global Boost Regulator market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A boost regulator is a voltage conversion method used to increase the input voltage in a circuit. This technique is essential when the supply voltage is too low to run the circuit. By increasing the supply voltage, the boost regulator ensures that enough energy is delivered to the circuit, prevents stops or failures, and guarantees safe operation. It is usually implemented in voltage conversion integrated circuits (ics), such as boost DC/DC converters.
