Abstracts

According to our (Global Info Research) latest study, the global Booster Transformers market size was valued at US\$ 2305 million in 2025 and is forecast to a readjusted size of US\$ 3413 million by 2032 with a CAGR of 5.8% during review period.

In 2025, global Booster Transformer output reached about 800,000 units and global capacity of around 900,000 units. The average price is about USD 2,800 per unit, with gross margins near 28%. Booster Transformers are specialized power transformers designed to increase or decrease voltage by a relatively small amount within an existing electrical power system, allowing operators to compensate for voltage drops, regulate feeder voltage, improve power quality, and optimize power transmission and distribution without replacing the main transformer. They are commonly installed in transmission lines, distribution networks, railway electrification systems, industrial plants, renewable energy installations, mining operations, and large commercial facilities where precise voltage adjustment is required. Compared with conventional power transformers, booster transformers provide flexible voltage regulation, improved system stability, reduced transmission losses, enhanced equipment protection, and better integration of distributed energy resources. The upstream supply chain includes manufacturers of grain-oriented electrical steel, copper and aluminum conductors, transformer insulation paper, epoxy resin, transformer oil or ester insulating fluids, bushings, tap changers, magnetic cores, cooling systems, monitoring sensors, and protection devices. Midstream consists of booster transformer manufacturers responsible for electromagnetic design, core and coil winding, assembly, insulation processing, testing, and system integration. Downstream customers include electric utilities, transmission and distribution network operators, railway electrification authorities, renewable energy developers, industrial manufacturing plants, mining companies, oil & gas facilities, data

centers, commercial buildings, engineering procurement and construction (EPC) contractors, and power system maintenance service providers that deploy booster transformers to improve voltage regulation and overall grid reliability.
