According to our (Global Info Research) latest study, the global Borate Mineral market size was valued at USD 2019.8 million in 2023 and is forecast to a readjusted size of USD 2855.8 million by 2030 with a CAGR of 5.1% during review period.

The borate minerals are minerals which contain a borate anion group. The borate (BO_3) units may be polymerised similar to the SiO_4 unit of the silicate mineral class. This results in B_2O_5 , B_3O_6 , B_2O_4 anions as well as more complex structures which include hydroxide or halogen anions. The $[\text{B}(\text{O},\text{OH})_4]^-$ anion exists as well.

Many borate minerals, such as borax, colemanite, and ulexite, are salts: soft, readily soluble, and found in evaporite contexts. However, some, such as boracite, are hard and resistant to weathering, more similar to the silicates.

Global Borate Mineral key players include Eti Mine Works, Rio Tinto (Borax), Quiborax, etc. Global top three manufacturers hold a share over 80%.

Asia Pacific is the largest market, with a share about 50%, followed by Europe, and North America, both have a share over 35 percent.

In terms of product, Borax is the largest segment, with a share over 70%. And in terms of application, the largest application is Glass, followed by Agriculture, etc.
