Abstracts

Bore gages and ID gages are designed for dimensional measurement or assessment of the internal diameter of components. Bore gages and ID gages are available that employ variable or fixed mechanical, electronic or pneumatic technologies. Specialized bore gaging tools have the capability to measure the degree of roundness (lobes), taper or internal steps, grooves or serrations. Some devices are set to test for a standard bore gage, displaying a deviation from the norm, while others are designed to simply measure the component in question.
