Abstracts

Boron Neutron Capture Therapy (BNCT) is a radiation science which is emerging as a hopeful tool in treating cancer, by selectively concentrating boron compounds in tumour cells and then subjecting the tumour cells to epithermal neutron beam radiation.

Benefits of BNCT: Biophysical Precision ? Effective in treating recurrent, multiple, and untreated cancers ? Targets cancer at cellular level ? Selectively destroys cancer cells ? Eliminates the need for respiratory gating and internal markers Efficient Treatment ? One to two treatment sessions ? Treats primary and undetected local microscopic cancer cells in parallel ? Potential for more patient throughput than other radiation therapies Better Patient Experience ? Does not require high-level patient positioning, improving patient comfort and reducing staff workload ? Potential to greatly reduce side effects and improve patient quality of life
