## Abstracts

According to our (Global Info Research) latest study, the global Borosilicate Fireproof Glass market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Borosilicate fireproof glass has many excellent functions due to its fine network structure, and its product structure has outstanding thermal and chemical stability, mechanical and technological functions, and excellent optical functions, so it has been widely used. Use and development, in ordinary borosilicate fireproof glass, there will be some different factors, especially high melting point temperature, and high viscosity, making it difficult to fit the float formation process, these problems greatly restrict its overall function and other Large-scale use of excellent features.

Borosilicate glass is made by adding a high proportion of boron oxide to silica as an additional network former in the glass melt. Borosilicate fireproof glass has a high softening point and low coefficient of thermal expansion. It will not burst due to high temperature under strong flames, and has excellent fire resistance. However, it is difficult to produce and process, and is widely used in building fireproof, heat-resistant glass and other products.
