The distributed optical fiber strain and temperature monitoring system (BOTDA/BOTDR) is a monitoring device that uses the Brillouin scattering principle to achieve online measurement of strain and temperature distribution along a single optical fiber. It is widely used in downstream markets such as oil and gas pipeline integrity monitoring, civil structure health monitoring, power transmission lines and rail transit tunnels. The global market size in 2024 is approximately US\$70 million, with an annual growth rate of approximately 8%. In the future, it will develop towards higher spatial resolution, real-time intelligent analysis, cloud platform integration and multi-physical quantity fusion monitoring.
