Abstracts

The global Bottle and Can Food X-Ray Foreign Body Detection Equipment market size is expected to reach \$ 413 million by 2032, rising at a market growth of 7.1% CAGR during the forecast period (2026-2032).

The bottle and can food X-ray foreign object detection equipment is an online detection device for packaged food in bottled, canned, glass bottles, metal cans, plastic bottles, and composite containers. It uses X-rays to penetrate food and packaging containers to form density difference images, and uses image algorithms to identify high-density foreign objects such as metals, glass, stones, bones, and hard plastics. It can also meet the detection needs of missing cans, bottles, abnormal liquid levels, sealing defects, damage, and abnormal filling quantities. This equipment is mainly used in the production lines of canned food, bottled beverages, dairy products, sauces, seasonings, infant and toddler food, ready to eat food, and high-end pre made food. It is an important equipment for food safety control and automated quality testing. In 2025, global Bottle and Can Food X-Ray Foreign Body Detection Equipment production reached approximately 5,109 Units, with an average global market price of around K US\$ 48.35 per unit.

The demand for X-Ray foreign object detection equipment for bottle and can food is mainly driven by the tightening of food safety supervision, the increasing quality traceability requirements of brand enterprises, the upgrading of automated production lines, and the improvement of export food testing standards. Compared to ordinary metal detection machines, X-Ray equipment can identify non-metallic foreign objects and adapt to complex packaging scenarios such as glass bottles and metal cans, thus continuously increasing its penetration rate in mid to high end food factories. Future

market opportunities will focus on multi perspective detection, high-speed online detection, low-dose imaging, artificial intelligence recognition algorithms, liquid level and sealing composite detection, and whole line data traceability systems. Enterprises with stable imaging capabilities, false rejection rate control, food industry cases, and after-sales service networks are more likely to obtain large food customer orders.
