When you bring water to a rolling boil, you're using heat to damage living organisms' structural components and disrupt critical life processes. Boiling water properly, at the correct temperature and for the correct duration of time, can address health risks caused by microorganisms, including rotaviruses and some strains of E. coli. The boiled water is then bottled and sold on the consumer market.

Boiled water brands initial focus through aggressive advertising is penetrating niche health markets through gentle, safe and infused water.
