According to our (Global Info Research) latest study, the global Bottled Water Combiblock market size was valued at US\$ 756 million in 2025 and is forecast to a readjusted size of US\$ 1090 million by 2032 with a CAGR of 5.3% during review period.

In 2025, global Bottled Water Combiblock production reached approximately 588 sets, with an average global market price of around 1.25 Million US\$/set.

Bottled Water Combiblock is an integrated PET bottled water packaging machine that combines bottle blowing, water filling and cap closing in one synchronized system. It usually connects a stretch blow molding module, sterile or hygienic filling valves, cap sorting and capping units, transfer wheels, clean-air protection, servo control, PLC/HMI operation and automatic CIP/SIP-ready piping. Compared with separate blowers and fillers, the combiblock reduces intermediate bottle conveying, lowers contamination risk, saves floor space and energy, and improves line efficiency for still water, mineral water, purified water and, in some designs, functional or lightly flavored water.

The average single-line production capacity of Bottled Water Combiblock is 30 sets, the average gross profit margin was 30.6%.

The upstream mainly includes stainless steel, aluminum alloys, servo motors, PLCs, sensors, pneumatic components, filling valves, molds, pumps, compressors, filtration parts, caps and PET preforms. The midstream consists of combiblock equipment manufacturers that integrate blowing, filling, capping, control systems, hygiene design, installation and after-sales service. The downstream mainly includes bottled water producers, beverage plants, dairy and functional drink companies, contract packers and

large FMCG groups that need high-speed, hygienic PET bottle production lines.

For a typical Bottled Water Combiblock, mechanical structure and stainless-steel fabrication account for about 25%?30% of total cost; blow molding molds, filling valves, capping heads and core process parts account for 20%?25%; automation components such as PLC, servo, sensors, HMI and electrical cabinets account for 15%?20%; purchased pumps, compressors, pneumatic and fluid-control parts account for 10%?15%; assembly, testing and quality control account for 8%?12%; engineering design, software, installation and commissioning account for 8%?10%; packaging, logistics and warranty reserve account for 3%?5%.

Demand for Bottled Water Combiblock is driven by rising bottled water consumption, capacity expansion in Asia, the Middle East, Africa and Latin America, and the replacement of separate blow-fill-cap layouts with compact integrated systems. Brand owners are seeking higher speed, lower energy use, lightweight PET bottles, improved hygiene and reduced operating cost. Business opportunities are strongest in medium- and high-speed lines, low-bottle-weight solutions, smart monitoring, quick mold change, water-saving rinseless designs, and turnkey upgrades for regional beverage plants shifting from semi-automatic or traditional filling lines to modern combiblock systems.
