According to our (Global Info Research) latest study, the global Bottling Line Machinery market size was valued at USD 5297.1 million in 2023 and is forecast to a readjusted size of USD 6671.1 million by 2030 with a CAGR of 3.3% during review period.

Bottling line machinery constitutes of production lines that are used for filling beverage into bottles in a large scale. Bottling is a primary function in the beverage industry as it supports, protects, and preserves the beverage from external environment.

Technological advancements in bottling line machinery is identified as one of the primary growth factors for this market. Vendors in bottling line machinery are investing heavily in R&D activities for developing new innovative bottling machinery for increasing the efficiency of machines. Manufacturing companies are producing more customized machinery on the basis of specific customer groups. Moreover, the production companies are also coming up with advanced solutions such as digitalization of production, digital direct printing for beverage packaging, and 3D printing. One of the leading vendors Sidel, partnered with the Brazilian producer Algar Agro to produce the world's lightest PET bottle for edible oil. These modern technology innovations have reduced the total weight of finished containers by about 22% and this has led to a significant reduction in the overall cost of ownership of the customer by optimizing delivery, packaging, and transportation of finished products.
