## Abstracts

A Bourdon gauge tube is a pipe that is sealed at one end and designed with a flat cross-section. It was named after its inventor, E. Bourdon of France. This tube is commonly used in Bourdon gauge tube pressure gauges, and its principle is also applied in other measuring instruments such as barometers, differential pressure systems, and thermometers.

The shape of the Bourdon gauge tube changes in response to variations in pressure and temperature. The greater the movement, the higher the accuracy.

Bourdon gauge tubes are made from various materials, including brass, aluminum brass, stainless steel, phosphor bronze, and other highly elastic alloys. For high-precision pressure measurement, beryllium copper and nickel span are especially used.

According to our (Global Info Research) latest study, the global Bourdon Gauge Tube market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
