Asia-Pacific is the largest market, with a share about 44%, followed by Europe and North America. In terms of product, Analog Pressure Gauges is the largest segment, with a share over 76%. In terms of application, Chemical and Petrochemical Industry is the largest market, with a share over 33%.

A Bourdon pressure gauge operates on the principle that, when pressurized, a flattened tube tends to straighten or regain its circular form in cross-section. The Bourdon tube comes in C, helical, and spiral shapes—although most gauges employ the C shape, which is the type of Bourdon pictured here. Bourdon tube pressure gauges are used for the Plant Engineering of relative pressures from 0.6 ... 7,000 bar. They are classified as mechanical pressure measuring instruments, and thus operate without any electrical power. Bourdon tubes are radially formed tubes with an oval cross-section. The pressure of the measuring medium acts on the inside of the tube and produces a motion in the non-clamped end of the tube. This motion is the measure of the pressure and is indicated via the movement.
