Abstracts

Bovine Viral Diarrhea is one of the most economically significant diseases in both beef and dairy cattle. Unlike many other virus species, the BVD virus can infect a bovine fetus in utero by crossing the placental barrier. If that happens during early pregnancy, specifically in the first trimester, the virus establishes itself in the calf at a time when the calf's immune system is still immature and unable to mount an immune response. Thus Bovine Viral Diarrhea Virus (BVDV) Test , can detect this virus.
