According to our (Global Info Research) latest study, the global Bowel Management Systems market size was valued at USD 1522.7 million in 2023 and is forecast to a readjusted size of USD 1738.8 million by 2030 with a CAGR of 1.9% during review period.

Bowel management is the process which a person with a bowel disability uses to manage fecal incontinence or constipation. People who have a medical condition which impairs control of their defecation use bowel management techniques to choose a predictable time and place to evacuate. A simple bowel management technique might include diet control and establishing a toilet routine. As a more involved practice a person might use an enema to relieve themselves. Without bowel management, the person might either suffer from the feeling of not getting relief, or they might soil themselves.

Europe is expected to command the largest share of the market in 2018. The strong market position of Europe in the bowel management systems market is mainly due to the significant colorectal/bladder cancer & IBD disease burden, favorable reimbursement scenario, and the increase in its geriatric population.
