Abstracts

According to our (Global Info Research) latest study, the global Box Type Industrial Computer market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

The box type industrial computer is specially designed for the industrial automation site. Because it often operates in a relatively harsh environment and has higher requirements for data security, embedded industrial computers are usually specially designed for reinforcement, dustproof, moisture-proof, corrosion-proof, radiation-proof, and anti-static. Secondly, the industrial environment also has very high requirements for the scalability of the box-type industrial computer. The interface design needs to meet specific external device expansion. In most cases, the box-type industrial computer needs to be customized separately to meet the needs of the site.

For the convenience of writing software in industrial control, computer motherboards are mostly used. However, because general commercial computer motherboards have poor tolerance to the environment, and the CPUs used by computer motherboards are all x86-based, the entire power will probably be less than It is above 200W, so fans must be used to dissipate heat, so as not to crash due to overheating, and the industrial workshop environment is very bad: hot and dusty, so we need to design industrial-specific motherboards to meet industrial To meet the requirements in production control, the box-type industrial computer was born accordingly.
