Abstracts

The global Box Type Industrial Computer market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

For the convenience of writing software in industrial control, computer motherboards are mostly used. However, because general commercial computer motherboards have poor tolerance to the environment, and the CPUs used by computer motherboards are all x86-based, the entire power will probably be less than It is above 200W, so fans must be used to dissipate heat, so as not to crash due to overheating, and the industrial workshop environment is very bad: hot and dusty, so we need to design industrial-specific motherboards to meet industrial To meet the requirements in production control, the box-type industrial computer was born accordingly.

The box type industrial computer is specially designed for the industrial automation site. Because it often operates in a relatively harsh environment and has higher requirements for data security, embedded industrial computers are usually specially designed for reinforcement, dustproof, moisture-proof, corrosion-proof, radiation-proof, and anti-static. Secondly, the industrial environment also has very high requirements for the scalability of the box-type industrial computer. The interface design needs to meet specific external device expansion. In most cases, the box-type industrial computer needs to be customized separately to meet the needs of the site.

This report studies the global Box Type Industrial Computer production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Box Type Industrial Computer, and provides market size (US$ million) and Year-over-Year (YoY)
