## Abstracts

The global BPADA market size is expected to reach \$ 378 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

BPADA, a kind of special monomer, is one of the main raw materials to make high performance PEI.

BPADA is mainly used to produce polyetherimide. Polyetherimide (PEI) is a high-performance thermoplastic known for its exceptional thermal stability, mechanical strength, and electrical insulation properties. Polyetherimide's electrical insulation properties make it a valuable material in the electronics and semiconductor industries. As demand for consumer electronics, smart devices, and 5G infrastructure increases, PEI is used in the manufacturing of connectors, insulators, circuit boards, and other high-performance electronic components. Additionally, PEI's resistance to high temperatures makes it ideal for use in semiconductor manufacturing equipment and high-frequency electronic applications that require superior performance under demanding conditions.

With growing demand of polyetherimide, the BPADA market will expand accordingly.

This report studies the global BPADA production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for BPADA and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of BPADA that contribute to its increasing demand across

many markets.
