## Abstracts

According to our (Global Info Research) latest study, the global BPADA market size was valued at US\$ 263 million in 2025 and is forecast to a readjusted size of US\$ 378 million by 2032 with a CAGR of 5.4% during review period.

BPADA, a kind of special monomer, is one of the main raw materials to make high performance PEI.

BPADA is mainly used to produce polyetherimide. Polyetherimide (PEI) is a high-performance thermoplastic known for its exceptional thermal stability, mechanical strength, and electrical insulation properties. Polyetherimide's electrical insulation properties make it a valuable material in the electronics and semiconductor industries. As demand for consumer electronics, smart devices, and 5G infrastructure increases, PEI is used in the manufacturing of connectors, insulators, circuit boards, and other high-performance electronic components. Additionally, PEI's resistance to high temperatures makes it ideal for use in semiconductor manufacturing equipment and high-frequency electronic applications that require superior performance under demanding conditions.

With growing demand of polyetherimide, the BPADA market will expand accordingly.
