Abstracts

Brachytherapy is referred to as sealed source radiation therapy because the radiation source is sealed and placed inside or near the body part requiring radiation therapy. Besides the treatment of most body part tumors, brachytherapy is commonly used to treat the cancers of the cervix, breast, skin, and prostate. The radiation source is enclosed in a protective wire or a protective capsule and ionizing radiations escape to treat the surrounding cancerous tissues only while avoiding its effects on body fluids.

Scope of the Report

This report focuses on the Brachytherapy Devices in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Majority of the low- and middle-income countries lack access to cancer treatment, which is expected to provide wide opportunities for brachytherapy firms. The market is anticipated to witness technological breakthroughs and increasing efficiency for treating various types of cancer during the forecast period.

Another factor driving growth of brachytherapy globally is availability of favorable reimbursement pathways and funding to provide quality healthcare facilities in low- and middle-income countries. Supportive pathways, such as National Health Insurance (NHI) Program and private healthcare reimbursement systems, cater the basic healthcare needs of low- and middle-income countries.

North America brachytherapy devices market is anticipated to lead the overall market vis-à-vis revenue by the end of 2017, and the region is expected to hold on to its dominant position until the end of 2022. The TMR report projects North America to be the most attractive regional market for brachytherapy devices, which is likely to expand at a CAGR of 4.7% between 2017 and 2022. Europe is another key market for

brachytherapy devices mainly due to a modern healthcare infrastructure and an increasing prevalence of cancer. However, Japan is expected to display the second-leading CAGR of 4.2% between 2017 and 2022. This is mainly because of meticulous research for treatment of cancer and efforts for the development of equipment for the treatment of the condition.

The worldwide market for Brachytherapy Devices is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
