Abstracts

Brain Stroke is one of the most common types of neurovascular disease in which either a clot blocks restricts supply of blood to the brain (ischemic) or blood vessels in the brain rupture (hemorrhagic). The vascular diseases affect normal functioning of the veins and arteries that constitute circulatory system of a human body generally in the form of blockage or rupture. The ruptures are usually headed by the formation of an aneurysm which is an unusual bulge or ballooning in the vessels of blood. They are formed when part of an artery wall weakens permitting the vessel to widen abnormally or balloon. It becomes difficult to predict an aneurysm before it ruptures, leading to existence of several un-ruptured aneurysms.
