## Abstracts

The global Brake Assist Pump Graphite Bearings market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Brake auxiliary pump graphite bearing is a key component used in automobile brake auxiliary pump. It is usually made of graphite material, which has high wear resistance, low friction coefficient and good self-lubricating performance. The brake auxiliary pump is an important part of the car brake system. It is usually located between the main pump and the brake to provide additional hydraulic pressure to enhance the braking effect of the brake. As a key component of the brake auxiliary pump, the graphite bearing of the brake auxiliary pump mainly plays the role of support and positioning to ensure the normal operation and stability of the pump. Due to the harsh working environment of the brake auxiliary pump, high temperature and high pressure, the choice of graphite material is particularly important. Graphite bearings for brake auxiliary pumps are usually made of high-purity natural graphite materials, which are specially processed and coated to improve their wear resistance and self-lubricating properties. At the same time, the design of graphite bearings also needs to take into account factors such as the precision of its cooperation with other components and the sealing of the bearings to ensure its normal work and long-term use.

This report studies the global Brake Assist Pump Graphite Bearings production, demand, key manufacturers, and key regions.
