Abstracts

A brake roller is a type of roller equipped with an integrated brake mechanism.

Brake rollers are used in a wide range of applications, such as production lines, where the centrifugal force of the brake shoes built into the roller spreads out to control the speed of sliding. As this force is directly proportional to both the weight of the sliding workpiece and its speed, it allows for smooth control of the sliding motion without the need for electrical power. However, it is crucial to consider the direction of rotation and the height positioning carefully during installation.

According to our (Global Info Research) latest study, the global Brake Roller market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
