Abstracts

According to our (Global Info Research) latest study, the global Brake Vacuum Pump market size was valued at US\$ 1293 million in 2024 and is forecast to a readjusted size of USD 2062 million by 2031 with a CAGR of 6.7% during review period.

The brake vacuum pump is an automotive component used to provide a stable vacuum source. Its main function is to enhance the boost effect of the brake system and ensure that the vehicle can respond quickly and provide sufficient braking force when braking. Especially in diesel engines, turbocharged gasoline engines, electric vehicles and hybrid vehicles, since the engines of these models cannot provide enough vacuum, the brake vacuum pump becomes an indispensable component to ensure the normal operation of the brake system.

Market Advantages

With the popularity of electric and hybrid vehicles, traditional mechanical vacuum pumps cannot meet the needs of these models, and brake vacuum pumps have become the mainstream choice, thus driving market growth. In turbocharged engines and high-efficiency diesel engine models, since the intake manifold cannot provide enough vacuum, independent vacuum pumps must be relied on to meet the brake assist needs. The application of intelligent braking technologies such as automatic emergency braking (AEB) puts higher requirements on the stability and response speed of the braking system, further promoting the development of high-efficiency vacuum pumps.

Market Disadvantages

Electric brake vacuum pumps use precision motors and control systems. Compared with traditional mechanical vacuum pumps, the manufacturing cost is higher, which may affect the popularity of low-end models. As countries promote carbon neutrality policies, the fuel vehicle market is gradually shrinking, and the market demand for mechanical vacuum pumps has also declined. Electric vacuum pumps need to have better heat dissipation and stability in high temperature environments and high load conditions, which puts higher requirements on technology research and development.

Market Trends

With the development of autonomous driving technology, the demand for intelligent braking systems, electronic stability control (ESC), and automatic emergency braking (AEB) in vehicles has increased, providing market space for high-performance electric vacuum pumps. In the future, electric brake vacuum pumps will develop in the direction of greater efficiency, greater energy saving, and smaller size. Combined with energy recovery technology, they will further optimize vehicle energy consumption and improve endurance.
