According to our (Global Info Research) latest study, the global Brakes market size was valued at USD 12550 million in 2023 and is forecast to a readjusted size of USD 13960 million by 2030 with a CAGR of 1.5% during review period.

Brakes for friction product are a mechanical device that inhibits motion by absorbing energy from a moving system. It is used for slowing or stopping a moving vehicle, wheel, axle, or to prevent its motion, most often accomplished by means of friction.

Materials used in the production of friction are usually rough or textured in order to provide added friction and increase efficiency. Smooth surfaces are used to transport materials easily and with little friction, however adding texture to a surface increases the energy required to move over it, thus slowing a moving object more quickly. Heat-resistant materials are often utilized as the process of creating friction typically generates heat energy as a byproduct.

Currently, there are some companies in the world can produce brakes for friction products, mainly concentrate in USA, Europe and Japan. The main market players are Federal-Mogul, Aisin-Seiki, Robert Bosch, Brembo, Continental, Delphi Automotive, Nisshinbo and SGL Carbon AG, etc.
