The global Branch Circuit Monitoring market size is expected to reach \$ 765.8 million by 2029, rising at a market growth of 4.5% CAGR during the forecast period (2023-2029).

Branch circuit monitoring provides remote access to real-time energy readings and facilitates data integration for data center-intensive industries, facilities working to optimize server capacity, and companies desperate to maintain uptime. Branch circuit monitoring helps minimize or prevent downtime by combining monitoring capabilities down to the plug level with overload alerts that indicate when a circuit is close to exceeding a threshold.

Branch Circuit Monitoring lets users track power usage effectiveness (PUE) from a central location. This includes down to the level of the individual branch circuit and the utility meter, and it covers both IT and facilities equipment.
