Abstracts

The global Brass Cylindrical Roller Bearing Cages market size is expected to reach \$ 577 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

In 2025, global production of brass cylindrical roller bearing cages is expected to reach approximately 28.40 million units, with an average selling price of around USD 12.5 per unit. Brass cylindrical roller bearing cages are critical components used in cylindrical roller bearings, maintaining spacing between rollers, guiding roller motion, and reducing friction and wear. Brass offers excellent wear resistance, mechanical strength, and good machinability, allowing stable performance in high-speed, high-load, and high-temperature conditions. These products are widely used in automotive, machinery manufacturing, wind power, electric motors, metallurgy, and rail transportation industries, serving as a core guarantee for bearing reliability and longevity.

Currently, the market for brass cylindrical roller bearing cages is in a steady growth phase, with demand mainly driven by automotive, machinery, wind power, and high-end industrial manufacturing sectors. From a market perspective, there are many manufacturers, but high-precision machining, wear-resistant brass material selection, and surface treatment capabilities remain core competitive advantages. In terms of trends, the industry is moving toward higher wear resistance, lightweight designs, and the ability to produce complex shapes, while balancing material performance and cost. Market perspectives suggest that with the growth of high-end machinery, automated production, and new energy equipment, demand for high-performance bearing cages will continue to rise, particularly the application value and replacement capability of brass in mid-to-high-end bearing segments.
