The electrode wire is made by diffusion annealing process. It is a composite electrode wire with a thick coating containing 50% zinc and 50% copper. This kind of coating needs to undergo a series of heat treatment processes, and its color changes from bright silver to yellow brown due to coating diffusion. The core of this electrode wire is ? Structure and plating ? Structure, which finally passes through a stretch process to press the coating into the core material through cold pressing. The surface of the diffused electrode wire is porous, which helps to improve the washability.
