## Abstracts

According to our (Global Info Research) latest study, the global Brazing Alloys market size was valued at USD 1035.5 million in 2023 and is forecast to a readjusted size of USD 1540.5 million by 2030 with a CAGR of 5.8% during review period.

A brazing alloy is a filler metal, when heated, liquifies and melts to flow into the space between two close fitting parts, creating a brazed joint.

A brazing alloy has suitable melting and flow properties to permit distribution by capillary attraction in properly prepared joints. Brazing alloys produce joints that meet service requirements, such as strength and corrosion resistance.

Standard brazing alloys include tin, silver, cadmium-free, sil- phos, copper, aluminum, nickel, and jewelers gold. Brazing alloys are found in solid form as rings and wire, slugs, washers, and powder, as well as paste.

Currently, the global top three external sale manufacturers are: Lucas-Milhaupt, Umicore, Harris Products. Their market share is less than 20%. In future, the competition pattern will not change.

The Global Info Research report includes an overview of the development of the Brazing Alloys industry chain, the market status of Automotive (Aluminum Brazing Alloys, Copper Brazing Alloys), Aerospace (Aluminum Brazing Alloys, Copper Brazing Alloys), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Brazing Alloys.
