Abstracts

According to our (Global Info Research) latest study, the global Brazing Ring market size was valued at US\$ 395 million in 2025 and is forecast to a readjusted size of US\$ 593 million by 2032 with a CAGR of 6.0% during review period.

A brazing ring consists of brazing filler metal pre-formed into a closed, open, arc-shaped, multi-turn, or other ring-like structure. It is positioned at the joint of pipe fittings, bushings, or other annular connections prior to welding. Upon heating to a temperature above the filler metal's melting point but below that of the base material, the ring melts and fills the joint gap via capillary action, creating a continuous, uniform connection with excellent airtightness and mechanical strength. Compared to manual wire feeding, brazing rings allow for precise control of filler metal quantity per joint, reduce material waste, and minimize variations caused by human error. They are primarily used in applications such as compressors, condensers, evaporators, suction bends, and copper-aluminum piping for air conditioning and refrigeration systems; automotive air conditioning, thermal management systems, fuel systems, and sensors; electric motors, transformers, electrical contacts, home appliances, heat exchangers, bathroom hardware, and general machinery; aero-engines, gas turbines, vacuum devices, semiconductor packaging, ceramic-to-metal joining, medical devices, electronic components, and superalloy parts; as well as nuclear power, boilers, oil and gas pipelines, chemical pressure piping, shipbuilding, high-purity process piping, and thin-walled fittings. The upstream supply chain primarily involves metals and master alloys—such as silver, copper, phosphorus, zinc, tin, nickel, aluminum, silicon, gold, and palladium—along with fluxes and related chemical materials. The midstream sector encompasses alloy smelting, ingot casting or continuous casting, rolling, wire drawing, annealing, precision sizing, ring winding/forming, cutting or end processing, flux filling or coating, cleaning, composition and dimensional inspection, and packaging. The

downstream sector primarily serves industries such as automotive, home appliances, electric motors, aerospace, electronics, and energy.
