## Abstracts

According to our (Global Info Research) latest study, the global Breast Biopsy market size was valued at USD 544 million in 2023 and is forecast to a readjusted size of USD 926.6 million by 2030 with a CAGR of 7.9% during review period.

A breast biopsy is the procedure of locating a diseased tissue in the breast and collecting the specimen sample of the area for further examination and diagnosis. Breast biopsies are performed by using minimally invasive biopsy systems, owing to minimal disfigurement and pain. Non-invasive biopsy techniques provide preventive measures that assist physicians in diagnosing and treating high-risk breast cancer. This information prevents the application of chemotherapy in breast cancer, reducing the complexities of chemo-radiations. Vacuum assisted breast biopsy devices (VAB), core needle biopsies and fine needle aspiration biopsy are commonly used to perform biopsy procedures.

Approximately 12% women in the U.S. are likely to develop breast cancer during their lifetime. Factors contributing to rise in breast cancer cases is over consumption of alcoholic drinks, lack of physical exercise, improper diet and eating habits, high level of hormonal imbalance & exposure of skin to intense sunlight. However, limited awareness among female population and substandard healthcare facilities especially in developing regions are the factor restraining the growth of breast biopsy market.

The Global Info Research report includes an overview of the development of the Breast Biopsy industry chain, the market status of Hospitals (Needle-Based Biopsy Systems, Breast Biopsy Needles), ASC (Needle-Based Biopsy Systems, Breast Biopsy Needles), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Breast Biopsy.
