Abstracts

Breast cancer is the one of the most prevalent cancer and among the leading cause of death in cancer patients. According, to WHO 2013 report 50800 women died of breast cancer in 2011. Metastatic breast cancer is an advanced stage of breast cancer. It involves cases in which breast cancer has spread to the other parts of the body. Some of the most common organs which are affected by metastatic breast cancer are brain, liver, bones and lungs. It is also known as stage IV breast cancer. Although cancer has spread to other parts of the body, but it is treated as breast cancer only. Usually, metastatic breast cancer occurs months or years after completion of treatment for early or locally advanced stages of breast cancer. Metastatic breast cancer cannot be cured. As it has spread to other organs, so it becomes impossible to get rid of all types of cancer. But the treatment of metastatic breast cancer can extend patient's life with increasing quality of life. Treatment of metastatic breast cancer is influenced by factors such as symptoms, past treatments, cancer cell characteristics and organs affected.

SCOPE OF THE REPORT:

This report studies the Breast Cancer Treatment market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Breast Cancer Treatment market by product type and applications/end industries.

Metastatic breast cancer treatment market is estimated to be driven by the increasing prevalence of breast cancer and its recurrence. Development of new technologies and increasing awareness among people is expected to drive demand for metastatic breast cancer treatment. Unavailability of effective treatment to cure and side effects related to the treatment can restrict the growth of metastatic breast cancer treatment market. High

cost associated with the metastatic breast cancer treatment can also hinder the growth of this market.
