Abstracts

Breast imaging technologies are used to obtain high-resolution images of breast tissues. These imaging modalities, such as ionizing and non-ionizing imaging technologies, aid in the early detection and diagnosis of breast diseases, especially breast cancer in women.

SCOPE OF THE REPORT:

This report focuses on the Breast Imaging Technologies in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. This market is expected to witness significant growth during the forecast period owing to increase in incidence of breast cancer worldwide and proactive initiatives by healthcare organizations to raise awareness about early breast cancer detection. Moreover, improved reimbursement scenario for breast imaging modalities (such as breast ultrasound and 3D tomosynthesis which helps in the detection of breast cancer in women with dense breast tissue). In addition, launch of technological advanced modalities such as automated whole breast ultrasound system (AWBU) and MBI/BSGI) fuel the market growth. However, high cost of these modalities and stringent regulatory approval processes are expected to impede the breast imaging technologies market industry growth.

The worldwide market for Breast Imaging Technologies is expected to grow at a CAGR of roughly 8.5% over the next five years, will reach 4800 million US\$ in 2023, from 2940 million US\$ in 2017, according to a new GIR (Global Info Research) study.
