Abstracts

According to our (Global Info Research) latest study, the global Breast Massager market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Breast massage is one of the most adopted methods for reducing breast cancer risk and is increasingly being suggested to patients who have breast cancer. It helps in the circulation of lymph fluid and enhances the immunity of the patients. Massage also improves the flow of blood to the tissues, thereby, leaving them well-nourished and free from blockages.

The growing demand for privacy has escalated the demand for massagers at home. They not only give comfort and a relaxing environment at home but also provide security and privacy to the users. Most people do not feel comfortable in a massage therapist's chamber, particularly with undressing, draping, and being massaged by strangers. People are also wary of scandals such as misconduct and illegal video recordings during the process, which have occurred in the past in many massage centers. A breast massager is developed based on proven massage therapies and it works in the same way as in clinics. It incorporates special mechanisms that slowly apply vibrations on the affected area and provide comfort and benefits. Thus, the demand for portable breast massagers, which can be used in the privacy of one's home is expected to increase during the forecast period and will contribute significantly to the market share.
