Abstracts

The global Breast Milk Refrigerator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Breast milk refrigerator is a refrigerator dedicated to storing breast milk. Since both bacteria and infectious viruses in breast milk can multiply at room temperature, they need to be stored in a low-temperature environment to keep them fresh and prevent bacteria from multiplying. The operating principle of Breast Milk Refrigerator is the same as that of ordinary refrigerators, which use the compressor to circulate refrigerant to cool down. They can significantly extend the shelf life of breast milk so that babies can consume it at any time.

This report studies the global Breast Milk Refrigerator production, demand, key manufacturers, and key regions.
